

Web Designing and Publishing Practical (PR2) JAN 2025

1-Create a paragraph element with the initial text "Original Text".

- (a) Create a button labeled "Change Text".
- (b) In the function, change the text of the paragraph to "Text Changed!".
- (c) Ensure that the text is dynamically updated when the button is clicked.

2-Create an HTML form for user registration:

- (a) Add fields for Name, Email, and Password.
- (b) Include radio buttons for gender and a dropdown for country selection.
- (c) Add submit and reset button.

3-Demonstrate how to use the **ng-repeat** directive to loop through an array of objects and display their properties in an HTML table.
