

Web Designing and Publishing Practical (PR2) JULY 2025

1-Create a JavaScript function that displays the multiplication table of a number entered by the user.

2-Create an HTML page containing the following polynomial expression.

$$4x^3+3x^2-2x+7$$

3-Write HTML code to demonstrate the following anchor tag behaviors.

- a. Create a hyperlink that opens a .pdf file in a new tab.
- b. Create a hyperlink that opens a downloadable .docx file in the same window.
- c. Jump from the top of the page to a specific section titled "Contact Us".
- d. Jump from "Contact Us" back to the top.
